PYTHON MINDMAP
1. Basics
Python Packages
Managing packages
Create virtual environment & Install packages
venv
virtualenv
conda
Useful packages
Import a package or module
Integrated Development Environments (IDEs) for Python
Working Directory
Data Types
Numeric types
integer
float
complex
Text type
string
Sequence types
list
tuple
range
Mapping type
dictionary
Set types
set
frozenset
Boolean type
boolean
Binary types
memoryview
bytes
bytearray
None type
Variables
Python Statements
Expression statements
assert
del
Conditional Statements
if-else, elif
try-except
Loop Statements
for loop
while loop
Loop Control Statements
pass
break
continue
Operators
Arithmetic
Assignment
Comparison
Logical
Identity
Membership
Bitwise
Functions
Create a custom function
Python built-in functions
2. Intermediate
A Brief History of Python
Why choose Python?
But should I still learn Python if ChatGPT can also code?
Python for Data Science
Data visualization
Static charts
Interactive charts
Dashboarding
Machine learning
Data analyses
Object-Oriented Programming
Classes
Attributes
Methods
Objects
Decorators
Why use decorators?
*args and **kwargs
Generators
Debugging
Error Handling
Type-hinting
Webscraping
Working with files
Git Version Control
3. Advanced
Developing Applications
Working with APIs
